The Associated Students of the University of Arizona (ASUA) SafeRide program has provided an alternative to walking alone at night since 1981. The Student Services Fee funding for this project has allowed SafeRide to continue improving campus safety by providing rides for students to locations near campus.

The Student Services Fee has consistently provided funds for a significant portion of SafeRide’s operational expenses, resulting in SafeRide being able to continue providing the exceptional and consistent service that our passengers have come to rely on. Additionally, the Student Service Fee funds have made it possible for SafeRide to continuously provide student jobs on campus as well as student leadership positions.

SafeRide is committed to providing the best possible service to our passengers and to ensure that we accomplish this goal we have continued to distribute survey’s to our passengers in order to pin point issues that we need to fix, things we’re doing rights, and things that we can improve on. The program will continue to use available tools to assess the program’s success and work to refine and better the service throughout each year. SafeRide also recently added an app to facilitate easier use of SafeRide’s services by students.

This allocation is mandated in the Student Services Fee Governing documents which state that $200,000 of the fee will be retained for ASUA SafeRide.
